## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over MacKenzie et al in view of Iida et al 707'. Note that MacKenzie et al in figure 5, teach that a ring and groove is used to quickly assemble the torch components. Though MacKenzie et al do not specifically mention rotation of less than 180 degrees to effect the retainment of the parts, the patent to Iida et al is applied for clearly teaching that quick connect of parts can be effected using a rotation of 90 degrees, see figure 2. This effects a quick coupling of parts and one of ordinary skill in the art would have been motivated by such teaching to adapt MacKenzie et al to use; such a quick coupling of 90 degrees rotation, to effect the coupling of the torch components. Note as per claim 3, the components comprise a shield cup and a tip.

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-29 have been considered but are moot in view of the new ground(s) of rejection. Applicants have effectively removed the Matus and Horner-Richardson patents from the rejection of the instant claims in response to submission of the 1.131 affidavit.
